

Fundamental Delivery, Valuation & Weight Consistency

Culture Analytics Dashboard — follow-up to the three-variant backtest study. All quartile memberships are **frozen from the stored Variant-W run** (43 snapshots, 2015-12-31 → 2026-06-30); analyses (i) and (ii) change only the outcome variable measured on those fixed portfolios. Generated 2026-07-27.

Headline. The evidence supports the **valuation-compression story with a regime-shift twist**. (1) Strong-culture (Q1) companies kept delivering better fundamentals after 2021 — the Q1–Q4 median forward EPS-growth spread **widened** from +1.1pp to +3.4pp — while the price-return spread fell from +7.9pp pa to –0.9pp pa. (2) Q1 de-rated relative to Q4: post-2021 Q1 combined ~15% pa earnings growth with –3.3% pa re-rating. Q1's P/E premium over Q4 sits at the 77th percentile of its own 10-year history — culture leaders are **not** historically cheap on this measure; the premium has held up even as returns stalled. (3) The era-swap test shows the late-era weights work in **both** periods (+8.8pp early, +11.7pp late) while early-era weights stopped working (+13.3pp → -0.3pp): the culture-performance link did not vanish, but **which dimensions carry it changed**.

(i) Fundamental delivery — the decisive comparison

Prices stopped rewarding culture leaders — fundamentals did not

Metric	Period	Q1	Q2	Q3	Q4	Q1–Q4
Median fwd EPS growth (%)	2016-2020	+9.5	+9.0	+8.8	+8.5	+1.1
Median fwd EPS growth (%)	2021-present	+12.6	+9.4	+9.4	+9.2	+3.4
Aggregate EPS growth (%)	2016-2020	+11.6	+4.4	-2.8	-8.6	+20.2
Aggregate EPS growth (%)	2021-present	+23.4	+18.8	+20.4	+16.7	+6.7
Median fwd revenue growth (%)	2016-2020	+8.2	+6.6	+4.5	+4.0	+4.2
Median fwd revenue growth (%)	2021-present	+10.4	+7.2	+5.4	+5.2	+5.2
Median margin change (pp)	2016-2020	+0.1	+0.1	+0.1	+0.5	-0.3
Median margin change (pp)	2021-present	+0.4	+0.2	+0.2	+0.5	-0.0

Medians are taken over members with positive base-year TTM values (per spec); the aggregate (portfolio-sum) EPS line is the robustness check. No quartile-snapshot fell below 60% EPS coverage.

(ii) Valuation

	Q1	Q4
Median trailing P/E (2026-06-30)	27.1×	18.5×
Sector-neutral excess E/P	-0.43pp	+0.20pp
Q1/Q4 relative P/E	1.47× — 77th percentile of 10-yr history (43 snapshots)	

E/P is computed as TTM net income ÷ market capitalisation (robust to splits and negative earnings); P/E medians over positive earners are shown for presentation. The sector-neutral

series subtracts each company's peer-bucket median E/P, so it cannot be driven by sector rotation.

Split-period valuation: start vs end of each sub-period

Period	Quartile	Median P/E start	Median P/E end	Excess E/P start (pp)	Excess E/P end (pp)
2016-2020 (2015-12-31 → 2020-09-30)	Q1	20.9×	26.9×	-0.23	-0.25
2016-2020 (2015-12-31 → 2020-09-30)	Q2	19.9×	23.5×	+0.00	+0.00
2016-2020 (2015-12-31 → 2020-09-30)	Q3	20.1×	20.5×	+0.10	+0.15
2016-2020 (2015-12-31 → 2020-09-30)	Q4	20.3×	21.6×	+0.05	+0.19
2021-present (2020-12-31 → 2026-06-30)	Q1	30.8×	27.1×	-0.45	-0.43
2021-present (2020-12-31 → 2026-06-30)	Q2	23.2×	22.6×	+0.00	+0.08
2021-present (2020-12-31 → 2026-06-30)	Q3	23.8×	21.3×	+0.02	+0.07
2021-present (2020-12-31 → 2026-06-30)	Q4	24.5×	18.5×	+0.09	+0.20

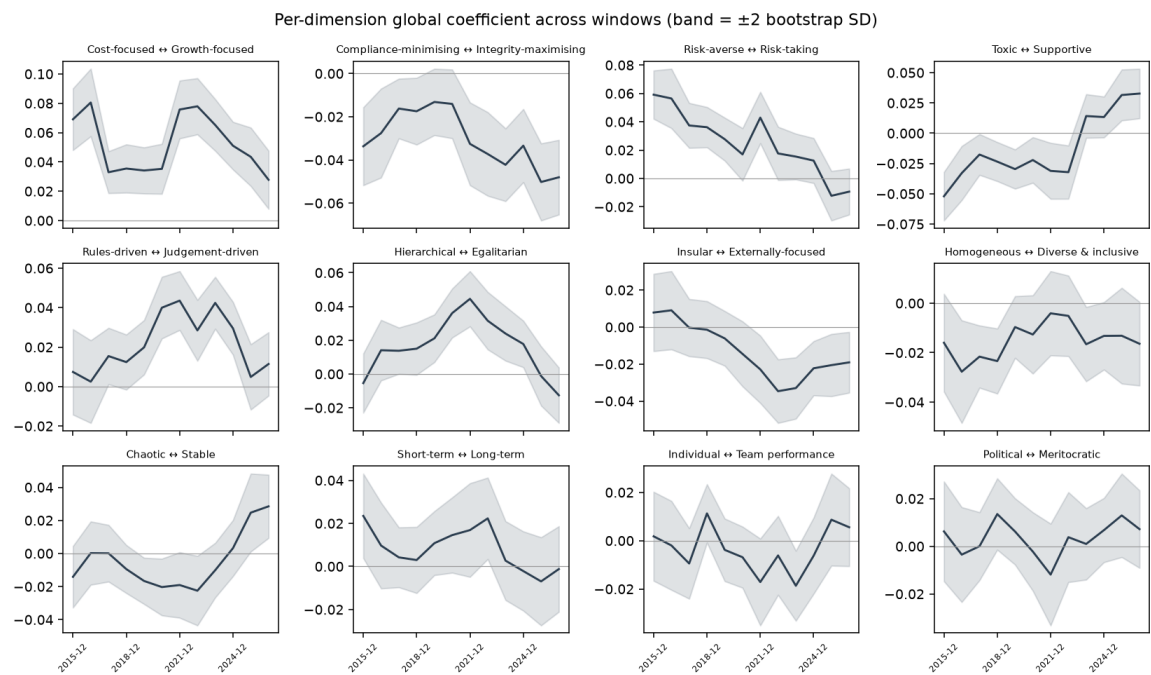

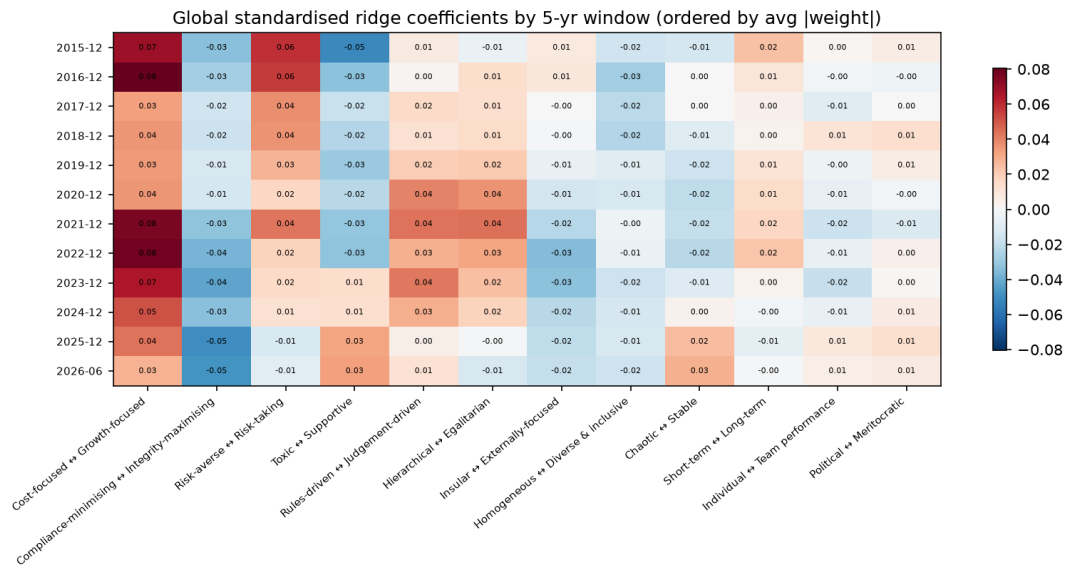

Return decomposition detail (pp pa)

Period	Quartile	Price return	EPS growth (per-share)	NI growth	Re-rating (P/E)	n
2016-2020	Q1	+19.1	+6.8	+6.4	+4.8	94
2016-2020	Q2	+13.9	+6.6	+6.5	+0.1	92
2016-2020	Q3	+13.1	+5.3	+5.2	+1.7	88
2016-2020	Q4	+11.2	+6.0	+5.8	+2.0	85
2021-present	Q1	+14.6	+13.2	+15.0	-3.3	171
2021-present	Q2	+14.4	+12.5	+12.9	-3.0	169
2021-present	Q3	+13.4	+11.5	+12.8	-2.9	153
2021-present	Q4	+15.5	+11.9	+12.4	-2.0	140

(iii) Weight consistency across eras

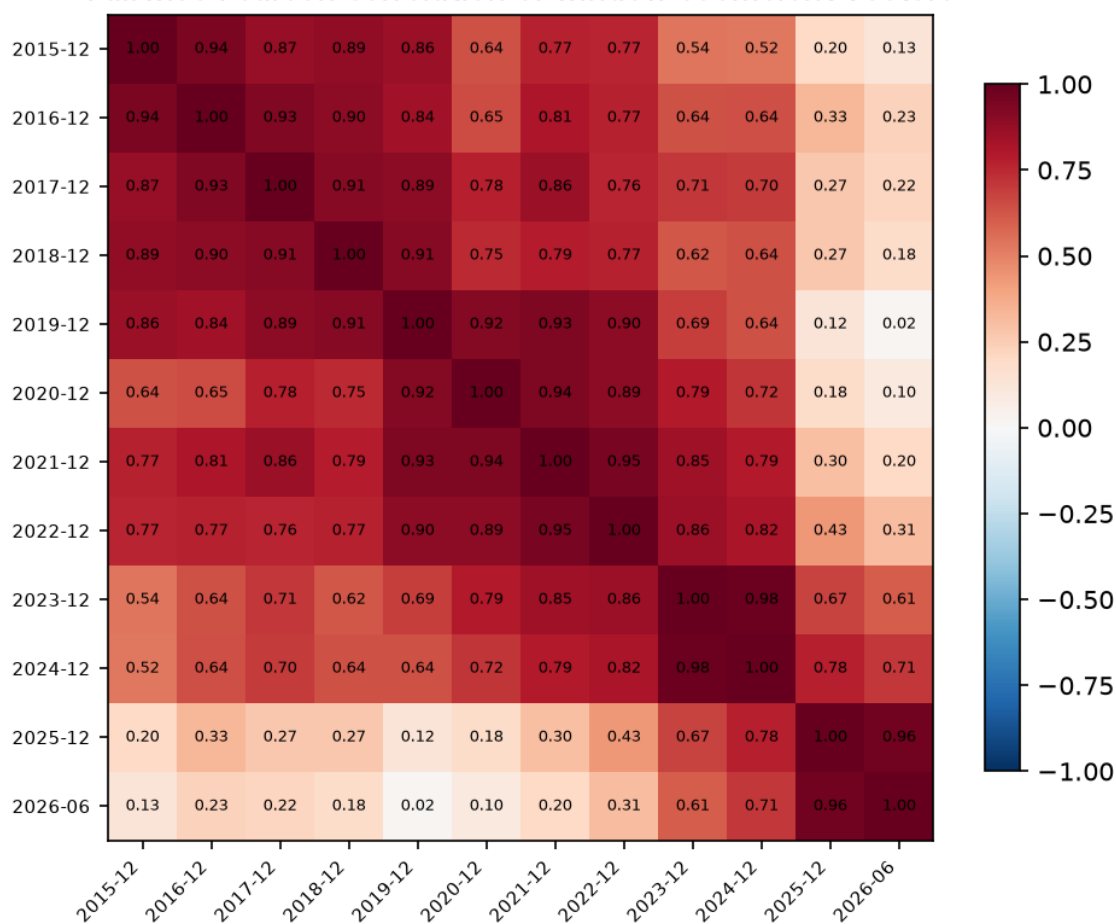

Fixed weights	2016-2020 spread	2021-present spread
Early weights (windows 2015-19)	+13.35 pp	-0.32 pp
Late weights (windows 2022-26)	+8.79 pp	+11.71 pp

Shaded cells are in-sample. Adjacent-window coefficient correlation averages 0.92; the early-average vs late-average vector correlation is 0.61 (Spearman 0.53; n=12 dimensions — treat with caution).

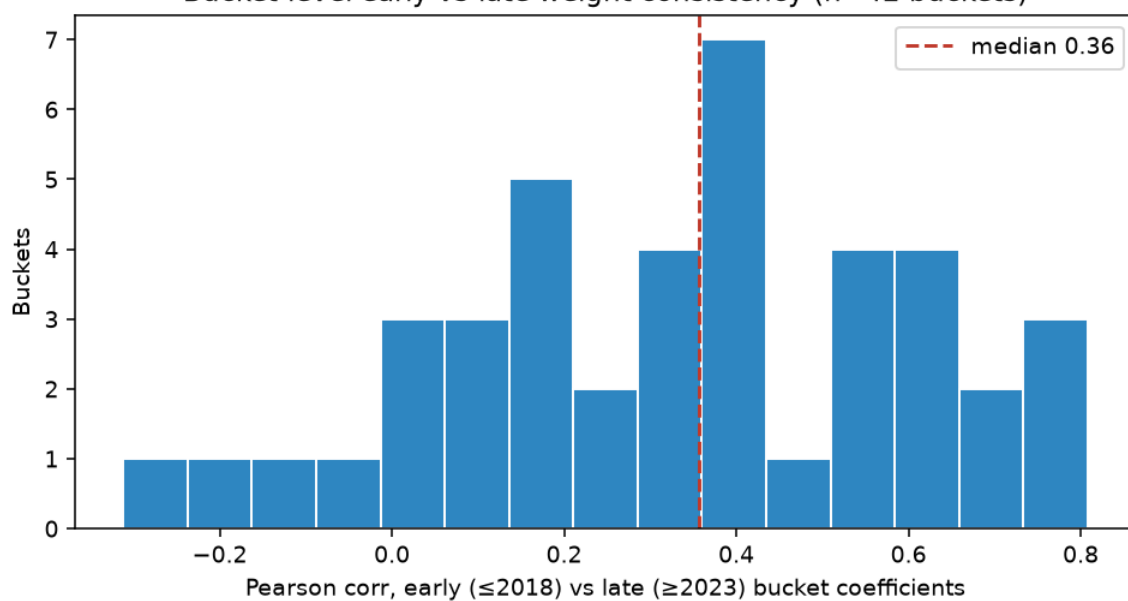

Dimension	Early mean	Late mean	$ \Delta $	Boot SD	Material (>2SD)	Sign flip
Toxic ↔ Supportive	-0.031	+0.012	0.043	0.010	yes	yes
Risk-averse ↔ Risk-taking	+0.043	+0.005	0.039	0.009	yes	no
Insular ↔ Externally-focused	+0.002	-0.026	0.028	0.009	yes	yes
Compliance-minimising ↔ Integrity-maximising	-0.022	-0.042	0.021	0.009	yes	no
Chaotic ↔ Stable	-0.008	+0.005	0.013	0.009	no	yes
Rules-driven ↔ Judgement-driven	+0.011	+0.023	0.012	0.008	no	no

Pairwise Pearson correlation of window coefficient vectors

Bucket-level early-vs-late weight consistency (n=42 buckets)

Conventions & caveats

- Point-in-time EPS: a quarterly figure counts at snapshot T only if its filing date $\leq T$ (missing filing dates: period end + 75 days). TTM = 4 most recent reported quarters, latest within 380 days of T, span ≤ 400 days.

- Annual-only reporters: 0 tickers in the backtest universe report only annually; the TTM rule (4 quarters within 400 days) excludes them from EPS metrics by construction, and they are flagged in fund_summary.json.
- Split convention identical to the variant study: formation snapshots before 2020-12-31 vs after.
- Reported diluted EPS is unadjusted for later splits; medians are robust to the few affected company-years, and the valuation analysis uses market-cap-based E/P which is split-proof.
- Return decomposition uses portfolio medians; the gap to the actual equal-weight price return reflects buybacks/issuance, composition and median-vs-mean effects.
- Era-swap weights are look-ahead by construction (both vectors use future information at early snapshots); it is a diagnostic, not a tradable strategy. Same survivorship caveats as the backtest.
- Bootstrap SDs: 200 resamples per window, global model, stored ridge alpha.
